

W-8 – Energy-Saving Spindle Tape

**5–8%
energy
savings**

- **higher efficiency**
- **lower energy consumption**
- **lower costs**

The worldwide best-known spindle tape W-8 is specially designed for the economic application on spinning and twisting machines:

- High tape flexibility
- Constant high friction (black side)
- No fiber and fluff accumulation
- Dimensional stable, no elongation
- > low bending resistance
- > reliable power transmission
- > no slip, constant spindle speed
- > no slip, constant spindle speed

Field tests at reputed spinning mills in cooperation with a famous institute confirmed that the replacement of polyamide spindle tapes with the high efficient W-8 spindle tape provides **substantial energy and cost savings!**

Features and benefits in brief

- High efficiency
 - Adhesive-free joining method
 - Excellent joining quality
 - Minimized speed loss during spindle stop
- > energy cost saving
 - > simple and fast joining system
 - > enables high spindle speed
 - > consistent yarn quality

The Flexproof joining system - simple and fast

Place the prepared tape ends into the guide rail

Position the covering plate and fix it with clamps

Clamp heating press
Pressing time: **3 min**

After pressing immediately clamp cooling tongs

Observe cooling time: **3 min**

After cooling remove tape from guide rail

Correct installation

Black side on driving pulley, green side on spindle whirls!
